

IMPROVE OPERATIONAL RISK MANAGEMENT WITH KRI ANALYTICS

Our Client

Global tire manufacturer
Founded in 1914
Headquartered in Ohio
9,000 + employees

Solutions

ARCPaaS™
SafeInsight™

Challenges

Factory data required from international manufacturing sites is not readily available to management for timely risk management
Customer data outside of the USA not available to measure product quality and service across the enterprise
Finance team unable to analyze raw material costs vs selling price by region for management reporting
Disaster recovery and continuity plans require effective alert management system systems

Success

Reduction in manual reporting time: Reduced KRI data collection and business analysis time by 75% while increasing the access to critical KRIs from monthly reporting to daily dashboards
Increased access to capital: Improved visibility into raw material costs and advanced price analytics accelerated debt payments and other financial obligations. As a result, increased bond rating with institutions and creditors
Detect and Remediated BCP Risks: KRI dashboards revealed more than five BCP "single points of failure" and system vulnerabilities that enabled management to identify the critical activities and dependencies that support the delivery of key products/services
