

Safelnsight™ :: Discover Hidden Risks – Seize New Opportunities

Finding a Needle in Haystack

Organizations are seeking new ways to transform their rapidly growing data into insight that mitigates risks and unlocks new opportunities. However, using the traditional reporting tools to look for unusual patterns in large data sets is like finding a needle in haystack.

The problem is not the resources, the personnel, or the data. It's that many organizations simply don't have the advanced analytics required to arrange the data, identify suspicious patterns and weaknesses; at least not fast enough. There's too much data, and not enough analytics!

We need a better way of knowing what the information means — of interpreting the data to discover an unknown business risk or opportunity as it happens or, even better, anticipate the next one.

For most organizations, reducing transaction errors and misuse continues to be one of the largest untapped opportunities to manage costs, improve top line revenue recognition, and ensure compliance with policies.

Safelnsight™

Safelnsight™, based on predictive analytics platform, delivers actionable information to business managers leveraging the existing reporting infrastructure such as Business Intelligence applications and mobile devices. Managers can discover patterns in all types of structured and unstructured enterprise data, and use this insight to improve bottom line, significantly reduce cash leakage and post-audit recovery costs, improve revenue recognition timing, safeguard integrity of financial statements, reduce cost of internal and external audits, increase visibility into controls environment and mitigate exposure to fraud.

This solution can deliver rapid return on investment, because the analytics for big data objects is built using SafePaaS, a web-based business insight acquisition system. This content can be rapidly deployed to monitor ERP transaction from the SafePaaS Smart Cloud. Most clients see results within four weeks.

Business Process Analytics

"By 2022, more than half of major new business systems will incorporate continuous intelligence that uses real-time context data to improve decisions." - Gartner

Hidden bottlenecks, repetitions, and loopbacks in business processes can now be tracked, exposed, analyzed and addressed easily and efficiently, which leads to increased efficiency. Exposing these problematic business activities within the processes also allows for a more effective business process optimization, reduces costs, and improves the bottom line. For example:

Procure to Pay

- Are there inappropriate associations between a vendor and an employee?
- Are your vendors compliant with trade regulations?
Are the vendors blacklisted?
- Are POs created on the same day as goods arrive?
- Are there duplicate invoice amounts being processed?

Order to Cash

- What regions are generating the most (or the least) revenue?
- Which customers have the most unrecognized revenue?
- Are there any orders processed over customer credit limits?
- Identifies the customers and transactions that are providing maximum profits by product, location, department, and geographic detail.

Record to Report

- Are all the financial close steps completed in the right order?
- Are there delinquent reconciliations?
- How are the quarterly results tracking against financial metrics such as cash-flow projections, current, quick and working capital ratios, and balance sheet items?

Use Safelnsight™ to discover patterns in all types of structured and unstructured enterprise data, and use this insight to improve bottom line, significantly reduce cash leakage and post-audit recovery costs, improve revenue recognition timing, safeguard the integrity of financial statements, reduce the cost of internal and external audits, increase visibility into controls environment and mitigate exposure to fraud.

Industry Analytics

Safelnsight™ includes industry specific solutions that address the unique needs of organizations. Whether it's streamlining operations, improving the customer experience or identifying new opportunities and markets – you can gain the capabilities you need to drive better outcomes. Below are a few industry analytics examples that how to improve business performance.

Financial Services

- Understand customer lifetime value and maximize customer profitability.
- Roll out consistent, risk-adjusted and relationship-based pricing.
- Monitor customer scoring techniques that can be audited and that are acceptable to regulators.

Healthcare

- Departmental Profits by Hospital.
- Patient Acquisition and Retention Costs.
- Risk and Compliance Incidents.

Manufacturing

- Analyze Inventory carrying costs.
- Understand margin impact on demand fluctuations.
- Predict appropriate inventory levels throughout the supply chain.
- Model sales and operations planning (S&OP) to reconcile sales and demand forecasts with supply chain and production plans.

Oil and Gas

- Predict equipment maintainability and reliability to reduced operational risk.
- Assess capital projects time, and budget risks against specified scope.
- Determine causes of production variances.

Retail

- Analyze root cause of merchandise losses such as returns, defects, pricing errors.
- Prevent freight overpayments by identifying vendors and carriers violating shipping terms.
- Identify duplicates and overpayments to media and agencies using data such as insertion orders, print orders and billing statements.
